

FALCON RIDGE | LOT 11

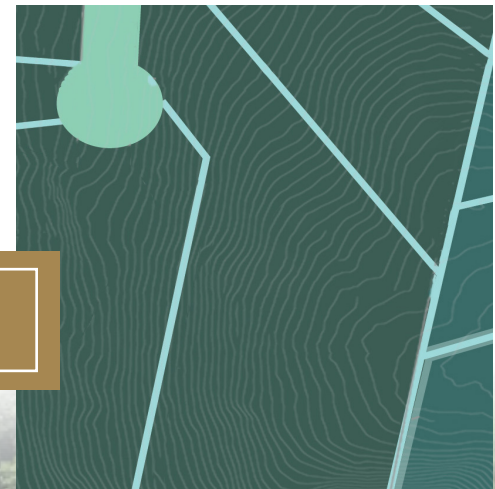

LOT

Falcon Ridge's study area identified a natural and functional forest ecosystem that offers a potential quality biotope for wildlife. As a result, the large variety within the ecosystem increases the diversity of the wildlife habitat. Wildlife species seen or identified by their calls or field tracks during the site visit are those of the black bear, striped chipmunk, spotted salamander, beaver, red fox, and snapping turtle.

This lot is located at the top of the ridge, and is accessible across the street from the common amenities. A large 3 acre lot located near the peak elevation of the property offers excellent views. With a minimal slope, across the street from the amenities, it's a real gem!

LOT SIZE	3 acres
PRICE	SOLD
